

**BEFORE THE  
VIRGIN ISLANDS PUBLIC SERVICES COMMISSION  
DOCKET NO. 603  
DIRECT TESTIMONY OF HUGO V. HODGE, JR.  
ON BEHALF OF  
THE VIRGIN ISLANDS WATER AND POWER AUTHORITY  
REGARDING THE PETITION FOR PERMANENT RATE RELIEF  
FOR THE ELECTRIC SYSTEM**

**November 15, 2012**

RECEIVED  
PUBLIC  
SERVICE  
COMMISSION  
ST. THOMAS  
2012 NOV 15 11

1 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

2 A. My name is Hugo V. Hodge, Jr. and my business address is: Virgin Islands Water and  
3 Power Authority, 9720 Estate Thomas, St. Thomas, U.S. Virgin Islands 00802.

4 **Q. WHAT IS YOUR OCCUPATION?**

5 A. I am the Executive Director of the Virgin Islands Water and Power Authority  
6 (“Authority”). In that capacity, subject to the direction of the Governing Board, I have  
7 overall responsibility for managing the operations, planning, and financing activities  
8 of the Authority.

9 **Q. PLEASE SUMMARIZE YOUR EDUCATIONAL BACKGROUND?**

10 A. I studied Mechanical Engineering at Georgia Institute of Technology in Atlanta,  
11 Georgia for three years as a Co-op Student. In 2001, I attended Southern Polytechnic  
12 State University, in Marietta, Georgia and received my Bachelor of Science in  
13 Mechanical Engineering. Subsequently, in 2005, I attended Georgia State University  
14 and received my Masters degree in Business Administration.

15 **Q. DO YOU BELONG TO ANY PROFESSIONAL ORGANIZATIONS?**

1       A. Yes. I have been a member of the Georgia Economic Developers Association, the  
2       National Black MBA Association, and the Southern Polytechnic State Alumni  
3       Association, as well as on the Board of Directors for Electric Cities of Georgia. I am  
4       currently a board member of the Consortium of Caribbean Electric Utilities  
5       ("CARILEC") and the Virgin Islands Next Generation Network ("viNGN") that is  
6       involved in evaluating broad band telecommunications issues in the Territory.

7       **Q. PLEASE SUMMARIZE YOUR EXPERIENCE IN THE UTILITY INDUSTRY.**

8       A. From 1988 to 1993, I was employed by Georgia Power Company designing outdoor  
9       lighting jobs for both residential and commercial customers, and assisted a large  
10      commercial customer to switch from gas to electric heating. During this time, I also  
11      worked as an assistant to engineers in conjunction with overhead and underground  
12      distribution line crews. Between 1994 and 1996, I worked for the Virgin Islands  
13      Water and Power Authority as an Engineering Technician/Aide. I assisted with the  
14      supervision of the operation and maintenance of an Israeli Desalinization ("IDE") Unit  
15      as well as the installation of a new water intake system. I coordinated power plant  
16      inspections and assessment of plant equipment during hurricane recovery efforts in the  
17      wake of Hurricane Marilyn. From 1998 to approximately 2005, I progressed from  
18      being a Design Engineer to New Business Manager to Engineering Manager for  
19      Marietta Board of Lights and Water, leading multifunctional teams on customer choice  
20      projects, and managing all functions of the engineering team tasked with development  
21      and delivery of dependable electric energy to client. I planned and managed full cycle  
22      engineering functions for the largest municipal electric utility in the state of Georgia  
23      and was fully accountable for developing load control strategies and other strategies

1 for the recruitment of new commercial and industrial customers. I also tactically  
2 planned and executed full cycle marketing and sales functions. Additionally, I was  
3 responsible for calculating and balancing loads for system requirements and  
4 coordinated system planning and load forecasting. My most recent past employer and  
5 position was at Griffin Power, a governmentally owned utility in the State of Georgia,  
6 as a Utility Director during 2005 to 2007. During this time, I managed the generation  
7 resources and secured adequate means of serving the loads in years to come, planned  
8 and implemented the expansion and maintenance of the electrical distribution system,  
9 formulated corporate service policies and programs, performed cost-benefit analyses  
10 and forecasting for proposed projects and programs, and oversaw preparation and  
11 implementation of department budgets. On January 1, 2008, I was named Executive  
12 Director of the Authority where I have been responsible for the day-to-day  
13 management and operations of the Authority's Electric and Water Systems. In short, I  
14 possess over 24 years of experience in the utility industry in marketing, engineering,  
15 and managerial roles.

16 **Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE VIRGIN ISLANDS**  
17 **PUBLIC SERVICES COMMISSION ("COMMISSION" or "PSC")?**

18 **A.** Yes. As Executive Director of the Authority, I have testified on many occasions  
19 before this Commission on matters related to the management and operations of the  
20 Authority.

21 **Q. WHAT IS THE PURPOSE OF THIS TESTIMONY?**

1 A. The purpose of my testimony is to generally discuss the Authority's petition, the need  
2 for permanent rate relief and the steps being taken by the Authority's management to  
3 improve the operation and financial condition of the Electric System.

4 My testimony will be supplemented by that of the Authority's Chief Financial Officer,  
5 Mr. Julio Rhymer, and by Mr. Craig Shepard of the firm SAIC, the Authority's rate  
6 consultant. They will provide testimony regarding the financial need for the rate  
7 increase, the impact on customer bills, if the requested rate increase is approved by the  
8 Commission and the financial implications to the Authority if the requested increase is  
9 not approved.

10 **Q. WHY DOES THE AUTHORITY NEED PERMANENT RATE RELIEF FOR**  
11 **THE ELECTRIC SYSTEM?**

12 A. In the approximately three years since the Authority received a rate increase in 2009,  
13 several things have caused a revenue shortfall for the Authority. Specifically, the  
14 Authority is experiencing: (1) less than required revenues due to the approval by the  
15 PSC of a lower amount than requested in the 2009 rate case; (2) continuing increases  
16 in expenses, including operating expenses and fuel costs, and a regulatory lag in  
17 recovering those costs; (3) less than anticipated growth in energy sales in FY 2010  
18 and negative growth in energy sales in FY 2011 and FY 2012; (4) increases in required  
19 debt service payments as a result of the issuance of the 2010 Bonds and the 2012  
20 Bonds; (5) extremely slow payment of electric bills by certain Government entities  
21 which has resulted, until recently, in an increase in total accounts receivables; and (6)  
22 an increased amount of money owed to the Electric System by the Water System.  
23 While the Authority's financial position has improved due to the interim rate increase

1 recently granted by the Commission, and the receipt of partial payment from the  
2 Government of its outstanding electric bills, the Authority is still in need of a  
3 permanent rate increase in order to pay essential expenditures such as those associated  
4 with fuel, salaries and wages, capital improvement projects, Other Post Employee  
5 Benefits (“OPEB”) and debt service. Accordingly, the Authority is seeking permanent  
6 annual rate relief of \$18,000,000, which is in addition to the interim revenue increase  
7 of \$8,600,000, or a total annual rate relief of \$26,600,000. The Authority requests that  
8 such relief be granted by the PSC effective on all bills rendered on and after July 1,  
9 2013.

10 **Q. DID NOT THE INTERIM RATE INCREASE PROVIDE SUFFICIENT RELIEF?**

11 **A.** No. The Authority appreciates the fact that the Commission recognized its financially  
12 precarious position when it granted the Authority interim rate relief. Unfortunately, the  
13 approved interim increase is insufficient for the Electric System to achieve financial  
14 stability. Given the Authority’s continuing difficulty, despite the interim rate relief, in  
15 paying its operating costs and debt service obligations on a timely basis and the  
16 continuing concerns of national rating agencies and the Authority’s independent auditors,  
17 there should be little doubt as to the Authority’s need to increase its revenues and  
18 improve its cash position. The Authority has provided to the PSC and its consultants  
19 monthly financial reports and audited financial statements establishing its need for  
20 additional permanent rate relief.

21 **Q. WHAT DO THOSE DOCUMENTS SHOW?**

22 **A.** These documents, especially the Authority’s audited financial statements, show its need  
23 for increased revenue. As you know, the Authority provides electric service to more than

1 54,000 customers. Yet during FY 2009, 2010, 2011 and 2012, its ability to provide  
2 reliable service to its electric customers consistently deteriorated. For example, with  
3 respect to the Electric System, page 48 of the 2011 Audit Report shows a decrease in net  
4 assets for FY 2009, 2010 and 2011 in amounts of \$6,225,790, \$7,466,513 and  
5 \$11,447,680, respectively. This represents a 5.8 percent decrease in FY 2009, a 7.0  
6 percent decrease in FY 2010 and a 12.3 percent decrease in FY 2011. Page 5 of the  
7 June 30, 2012 Electric System Financial Statement shows that the System experienced a  
8 decrease in net assets of \$22,043,993, or approximately 25 percent, during FY 2012.  
9 Pursuant to normal utility practice, the net assets reflect the ability to provide service. A  
10 decrease in their value indicates that the normal utility practice of providing for renewal  
11 and replacement of net assets is not occurring.

12 Clearly, the Authority cannot continue to provide reliable electric service if its net assets  
13 continue to decrease as demonstrated above.

14 **Q. DID THE DEFERRED FUEL BALANCE MAKE THE AUTHORITY'S ABILITY**  
15 **TO OPERATE DIFFICULT?**

16 **A.** Yes. In FY 2009, the Authority's deferred fuel balance increased by \$14.7 million to  
17 \$45.9 million because the Levelized Energy Adjustment Clause (LEAC) did not allow the  
18 Authority to recover all of its fuel cost during the year. Similarly, in FY 2010, the  
19 Authority's deferred fuel balance increased by \$354,000 to \$46.2 million as the LEAC did  
20 not adequately allow the Authority to recover all of its cost of fuel during the year. Also,  
21 in FY 2011, the deferred fuel balance increased by \$0.8 million to \$47.1 million as the  
22 LEAC permitted by the PSC did not adequately allow the Authority to fully recover its  
23 cost of fuel during the year. This deferred fuel balance caused the Authority to divert its

1 internally generated funds away from much-needed maintenance and the capital  
2 improvement program.

3 **Q. IS THERE ANYTHING ELSE THAT CONFIRMS THE IMPACT OF**  
4 **DECLINING REVENUES AND INCREASING COSTS OF THE AUTHORITY?**

5 **A.** Yes. The Authority's Chief Financial Officer, Mr. Julio Rhymer, will explain the  
6 financial information in greater detail in his testimony. In addition, the Authority's rate  
7 consultant, Mr. Craig Shepard of the firm of SAIC, will explain the adjustments to the  
8 data required to determine the Authority's revenue requirements which establish the  
9 amount of the requested rate increase, based on an appropriate test year.

10 **Q. IN 2009, THE AUTHORITY RECEIVED A RATE INCREASE AND PROMISED**  
11 **TO PERFORM A LOAD RESEARCH AND COST OF SERVICE STUDY. HAVE**  
12 **THEY BEEN COMPLETED? IF NOT, WHY NOT?**

13 **A.** Instead of a detailed load research study, the Authority prefers to conduct a cost of  
14 service study using more conventional methods which could be performed less  
15 expensively and more quickly. Given current economic conditions, the Authority  
16 encourages the Commission to reconsider and permit it to do a cost of service study using  
17 more conventional methods utilizing the funds that the Commission made available for  
18 load research. If the Commission remains committed to the Authority performing a  
19 detailed load research study, such a study will require at least a three year time frame to  
20 accomplish. The Authority acknowledges that it received funding to conduct load  
21 research. However, dedicated funds were not provided for a cost of service study, nor  
22 were funds available from internally generated funds primarily because of the deferred  
23 fuel balance. The Authority would need funding to perform a cost of service study.

1 Recently, the Authority has begun the process of seeking to engage a firm to devise and  
2 submit a detailed plan for the completion of a load research and cost of service study. As  
3 suggested by the PSC's technical consultants in 2009, the plan would include:

- 4       ▪ Development of a sample design.
- 5       ▪ Selection of sample customers.
- 6       ▪ Acquisition of necessary metering equipment.
- 7       ▪ Installation of special metering equipment at sample customers' premises.
- 8       ▪ Collection of data.
- 9       ▪ Editing and verification of collected data.
- 10      ▪ Analysis of data and reporting of results.

11 With the assistance of its consultant, the Authority will develop a schedule for  
12 completion of the load research and cost of service study.

13 **Q. IS THERE ANY OTHER MATTER YOU WISH TO ADDRESS IN YOUR**  
14 **TESTIMONY?**

15 A. Yes. During recent years, the Authority's rates did not include recovery of certain OPEB  
16 costs thereby causing an under-recovery of those costs. The Authority rate filing includes  
17 such OPEB costs and asks the Commission to allow its rates to be set at levels sufficient  
18 to recover them.

19 **Q. CAN YOU EXPLAIN THE IMPACT DUE TO COSTS AND LIABILITIES**  
20 **RELATED TO OPEB?**

21 A. Yes. Changes to the accounting treatment for OPEB related costs and liabilities have  
22 resulted in increased cash needs of the Authority and the Electric System. See the  
23 testimony of Mr. Julio Rhymer. Specifically, in FY 2008, the Authority adopted the

1 provisions of GASB Statement No. 45, Accounting and Financial Reporting by  
2 Employers for Post Employment Benefits Other Than Pensions. As a result of GASB 45  
3 implementation, the Authority started recognizing OPEB costs under the accrual basis of  
4 accounting, as opposed to the pay-as-you-go method used before the implementation of  
5 such pronouncement. OPEB cost is now recognized based on actuarial calculation of  
6 benefits earned by beneficiaries (employees and retirees). This represents a significant  
7 increase in costs recognized by the Authority beginning in the year of implementation.  
8 However, these increased costs have not been included in Electric System rates approved  
9 by PSC.

10 According to the Authority's auditors, Ernst and Young, the "lack of inclusion of OPEB  
11 costs that are recognized for GAAP purposes in [our] rates has severely affected the  
12 ability to recover costs" and has led to a regulatory accounting issue identified in the  
13 FY2011 Financial Statement and Supplemental Schedule (FY 2011 Audit). As stated in  
14 the FY2011 Audit, the Authority employs an actuary to estimate the costs and liabilities  
15 for OPEB. The actuary's estimate of the Authority's accrued OPEB liability was  
16 approximately \$101.2 million at June 30, 2011 of which the Electric System share is \$82  
17 million or 81 percent. The Authority's annual OPEB cost is calculated based on the  
18 annual required contribution (ARC), an amount actuarially determined in accordance  
19 with GASB Statement No. 45. The ARC represents a level of funding that, if paid on an  
20 ongoing basis, is projected to cover normal cost (current and future benefits earned) each  
21 year and to amortize any unfunded actuarial liabilities over a period of time not to exceed  
22 30 years.

1 According to Ernst and Young, the net OPEB obligation is the net amount for which the  
2 Authority would be obligated and is equivalent to the cumulative annual OPEB cost. The  
3 Electric System's annual OPEB obligation for FY2011 was approximately \$6.1 million,  
4 as identified in the FY2011 Audit. The Electric System's annual estimated OPEB  
5 obligation for FY2012 (based on unaudited data) is \$6.1 million. Therefore the Authority  
6 requests an adjustment to its base rate revenues of \$6.1 million to recover its annual  
7 OPEB obligations.

8 **Q. IS THERE ANYTHING ELSE?**

9 A. Yes. The Authority recognizes that the rate adjustment it seeks comes at a very difficult  
10 time. We are still reeling from the economic consequences resulting from the closure of  
11 the oil refinery on the island of St. Croix, the unavailability of the lower cost of fuel with  
12 the closure of the refinery, the financial impact of replacing water production by steam  
13 desalination with reverse osmosis technology and the resulting shifting of costs from the  
14 Water System to the Electric System, and the repayment of an ever increasing unsecured  
15 loan from the Water System to Electric System, among others. However, the Authority is  
16 in the process of implementing an Energy Production Action plan to address these and  
17 other issues (e.g., aging generating resources). The Plan identifies a number of projects  
18 approved by the Authority's Governing Board to improve the Systems' efficiency and  
19 reliability, many of which have already begun. It will require additional revenue to fully  
20 implement it. Moreover, during this period, it is envisioned that representatives of the  
21 PSC would work with the Authority to finance the implementation of the plan so as to  
22 satisfy the Authority's financial needs, and secure the provision of reliable, affordable

1 electricity in the near and longer term, for the benefit of the Authority's customers and  
2 the citizens of the Territory.

3 **Q. WHAT WILL BE THE ECONOMIC EFFECT ON THE AUTHORITY'S CREDIT**  
4 **WORTHINESS IF THE AUTHORITY DOES NOT RECEIVE THE REQUESTED**  
5 **RATE RELIEF?**

6 **A.** Its ability to access capital markets will be threatened. All three national rating agencies  
7 have expressed concern about the near term and long term credit worthiness of the  
8 Authority and assigned a negative outlook to the Authority. In addition, as recently as  
9 March 2012, Fitch Ratings, Inc. downgraded the Authority's credit rating on all of its  
10 outstanding Electric System Revenue Bonds from investment grade to non-investment  
11 grade. In addition, Standard and Poor's downgraded the Authority's subordinate debt,  
12 and Moody's has placed a negative watch on the Authority. The loss of the investment  
13 grade rating of its indebtedness will make it more difficult and costly for the Authority to  
14 obtain long-term financing. Moreover, this negative outlook and reduced credit rating  
15 will likely have an adverse effect on the availability and cost of subordinated debt, such  
16 as the line of credit. In order to prevent a further downgrade in the Authority's national  
17 credit rating, at a time when it needs to maintain access to credit markets, the Authority  
18 must receive just and reasonable rates.

19 **Q. BESIDES REQUESTING THIS RATE INCREASE, WHAT STEPS HAS THE**  
20 **AUTHORITY TAKEN TO CURE ITS REVENUE DEFICIENCY AND IMPROVE**  
21 **THE OPERATION OF THE ELECTRIC SYSTEM?**

22 **A.** The Authority has taken many steps. First, the Authority timely submits its LEAC filing  
23 to the PSC in an attempt to recover its fuel costs as soon as possible after fuel is

1 delivered. The Authority has in the past and plans to petition in the future for approval of  
2 a monthly LEAC. Second, the Authority has refunded certain outstanding indebtedness  
3 in order to take advantage of lower interest rates and to reduce monthly debt service  
4 payments. Third, the Authority has also considered financing new capital projects in  
5 order to improve System reliability and efficiency. Fourth, the Authority has decided not  
6 to run spinning reserves in order to reduce costs. Fifth, the Authority's Governing Board  
7 has reduced the Electric System Budget by approximately \$2.2 million in FY 2013.  
8 Sixth, the Authority has deferred, until recently, performing major overhauls and  
9 maintenance on its generating units, which regrettably on the island of St. Thomas  
10 resulted in interruptions in service to its customers. That maintenance and renovations is  
11 now underway in part as a result of the rate financing mechanism (RFM) approved by the  
12 Commission in October 2011, which became effective on April 1, 2012. Seventh, the  
13 Authority has leased from General Electric a combustion turbine generating unit to  
14 provide a temporary generating resource while certain generating units on the island of  
15 St. Thomas are undergoing major repairs. The leasing of the combustion turbine has  
16 improved overall electric generation efficiency and reduced fuel costs. Since the leased  
17 unit began operation in May 2012, the monthly overall system average production cost  
18 benefit ranges between \$0.035 to \$0.066 per kWh and far exceeds the cost of the RFM  
19 surcharge of \$0.023 per kWh. The magnitude of the savings from this will offset the  
20 impact of the requested rate increase. Eighth, the Authority has been working with  
21 representatives of the central government to speed up payments and reduce outstanding  
22 accounts receivable balances. That effort has paid off, as evidenced by the recent  
23 payment by the central government of over \$15 million on its past due accounts

1           receivables. In addition, the Authority has issued a request for proposals for a collection  
2           agency to collect the rest of its significantly past due account receivables. Ninth, the  
3           Authority has prioritized making payments to vendors, contractors and others so as to  
4           have monies on hand to pay the costs of fuel, salaries and wages, and debt service.  
5           Tenth, pursuant to the Stipulation dated September 27, 2011; the Authority has taken  
6           steps to retain an independent advisory contractor (“IAC”) to assist it in improving the  
7           efficiency of its production of electricity. In this regard, it is seeking to put out its request  
8           for proposals (“RFP”) for the IAC by the first quarter of 2013, provided all predicate  
9           approvals have been obtained. The Authority has submitted its draft RFP to the PSC and  
10          its consultants for their input. As you may be aware, the IAC is expected to provide  
11          technical advisory services to the Authority and to help develop recommendations related  
12          to deferred maintenance, capital improvement and performance programs associated with  
13          the operation and maintenance of the Randolph Harley Power Plant.

14          Eleventh, the Authority has entered into power purchase agreements to provide  
15          approximately 18 MW of solar power. Twelfth, the Authority has initiated a wind  
16          resource study in conjunction with the Virgin Island Energy Office to evaluate the  
17          feasibility of implementing wind energy projects. Thirteenth, the Authority is working  
18          with Qualifying Facilities (QF) entities on the implementation of biofuels projects for the  
19          islands of St. Thomas and St. Croix. Fourteenth, the Authority is performing a full  
20          environmental assessment of the impact of installing a submarine cable to connect with  
21          Puerto Rico’s electric utility. Fifteenth, the Authority has applied for a Federal grant to  
22          fund the development of a solar energy microgrid on the island of St. John. Sixteenth,  
23          the Authority is seeking a loan from the Rural Utility Services to fund the development of

1 an Advanced Metering Infrastructure (AMI). Finally, the Authority has issued two  
2 requests for qualifications ("RFQ") in order to identify and determine the interest of  
3 qualified companies to implement and operate a turkey solution to supply the Authority  
4 with liquid natural gas ("LNG") or liquefied petroleum gas ("LPG") or propane to be  
5 burned in the Authority's existing generating units in lieu of fuel oil. Thirteen potential  
6 suppliers have responded, of which five propose LPG, and eight propose LNG. After  
7 review of the responses, the Authority plans to negotiate with one or more qualified  
8 respondents in order to implement the project to use LPG or LNG as a primary fuel,  
9 instead of fuel oil, in order to take advantage of much lower prices for gasified fuels and  
10 thereby minimize or even eliminate the need for higher priced fuel oil to run its  
11 generating units. This is in accordance with the Authority's Energy Production Action  
12 Plan which can be viewed on its website at [www.viwapa.vi](http://www.viwapa.vi). The Authority is requesting  
13 funding in the form of a regulatory asset to cover the costs of pursuing alternative and  
14 renewable energy projects.

15 **Q. PLEASE SUMMARIZE THE BASIS AND IMPACT OF THE AUTHORITY'S**  
16 **REQUEST FOR RATE RELIEF?**

17 **A.** The detailed basis and impact of this request are set forth in testimony of Mr. Rhymer  
18 and Mr. Shepard, which I have read and fully support. In general, the Authority is  
19 seeking an across-the-board increase in base rates designed to produce approximately  
20 \$18,000,000, in addition to the interim rate increase, on an annual basis on bills rendered  
21 on and after July 1, 2013. For FY 2014, the requested across-the-board annualized  
22 increase equates to an approximately 5.1 percent increase above revenues using the  
23 current rates, which include the interim rate increase. This increase is also equal to

1 approximately 2.5 cents per kWh sold based on projected energy of 723,918,000 kWh in  
2 fiscal year ended June 30, 2014. The requested increase of 2.5 cents per kWh increases  
3 the monthly bill for residential service by approximately \$10 based on average residential  
4 usage of 400 kWh per month.

5 It should be noted that the requested increase provides for an amount available from  
6 revenues for capital improvements and working capital of approximately \$4.3 million,  
7 which does not meet the desired level for capital improvements based on the capital  
8 budget and level of depreciation. The Authority is purposely requesting a level of rate  
9 relief that is below the level required for long term financial stability of the Electric  
10 System in order to minimize the rate increase to our customers at this time. This is being  
11 done in recognition of the current difficult economic conditions and high cost of fuel.

12 It should be further noted that the requested increase is based on projected sales which  
13 have some degree of uncertainty. In addition to the difficult economic conditions, several  
14 large hotels are in the process or are considering supplying their electric power needs by  
15 self generation. This would adversely impact the level of revenues projected to be  
16 recovered from this requested rate relief. To date, these customers have not provided the  
17 Authority with any formal indication of their intent to withdraw from the Electric System,  
18 and it is anticipated that they would retain service from the Authority in a standby mode.

19 In order to address the potential change in status for these customers, the Authority is in  
20 the process of developing a Standby Service tariff that will be submitted to the PSC for  
21 approval.

22 Based on the initiatives to be funded through the RFM surcharge, coupled with the  
23 Authority's planned capital improvement initiatives, the Authority projects that on

1 St. Thomas the Randolph Harley plant will achieve a heat rate in the near term in the  
2 range of 13,500 to 13,700 British thermal unit (Btu) per kWh versus the initial overall  
3 heat rate of the Randolph Harley plant, which was in the range of 17,000 Btu per kWh  
4 prior to implementation of the RFM surcharge. The initiatives are projected to generate  
5 savings of \$0.072 per kWh for the St. Thomas plant - and system-wide savings of \$0.043  
6 per kWh - compared to the period before implementation of the RFM surcharge.

7 In addition, on St. Croix, the current Richmond plant heat rate is approximately 14,800  
8 Btu per kWh primarily due to unanticipated problems forcing Unit 20 out of service.  
9 Prior to this, the Richmond plant average heat rate ranged from 13,500 to 13,700 Btu per  
10 kWh without credit for water production. The Authority projects returning to an average  
11 heat rate in the range of 13,500 to 13,700 Btu per kWh for the Richmond plant with  
12 implementation of its capital improvement program contemplated by this rate filing. This  
13 is projected to improve plant reliability and arrest plant deterioration. This is also  
14 projected to result in additional savings of \$0.023 per kWh for the Richmond plant or a  
15 system-wide savings of \$0.01 per kWh. This, together with the savings from the  
16 Randolph Harley plant on St. Thomas, is anticipated to yield a total system-wide savings  
17 of \$0.053 per kWh. This fuel cost savings is projected to substantially exceed the impact  
18 of the requested base rate relief of \$0.025 per kWh.

19 Should the PSC not grant the requested rate relief, the Authority's provision of service  
20 will continue to deteriorate over time, it will not be able to pay all of its operating costs  
21 and debt service obligations nor invest in the improvements identified above and will  
22 further reduce its credit rating and access to the financial market at a reasonable cost.

23 **Q. DOES THAT CONCLUDE YOUR TESTIMONY?**

DIRECT TESTIMONY OF HUGO V. HODGE, JR., EXECUTIVE DIRECTOR, VI WATER & POWER AUTHORITY  
BEFORE THE VI PUBLIC SERVICES COMMISSION  
RE: PETITION FOR PERMANENT RATE RELIEF FOR THE ELECTRIC SYSTEM (DOCKET NO. 603)  
NOVEMBER 15, 2012

1 A. Yes, it does.
